

SOURISH SARMAH

PROFESSIONAL EXPERIENCE

Agentic Private Markets

India (Remote)

Tech Lead

Jan 2026 - May 2026

- Architected an **Excel-like data Grid** with a streaming ingestion pipeline, tool-orchestrated SQL execution layer, and database-level **Row-Level Security** via tenant and grid-scoped policies, enabling **LLM agents** to run complex aggregations, joins, and filters across enterprise-scale datasets with zero cross-tenant leakage.
- Led the organization's **SOC 2 compliance initiative**, driving cross-functional execution across engineering, security, and operations to deliver audit-ready controls and unlock enterprise readiness.

Senior Software Engineer

Sep 2025 - Jan 2026

- Engineered a **multi-agent research orchestration** pipeline that decomposes complex queries using LLMs, executes parallel web and file searches, performs intelligent deduplication, and synthesizes responses within strict token budgets.
- Built a production **realtime voice agent on OpenAI Realtime**, with streaming tool execution, interrupt handling, and persistent multi-tenant sessions, a major UX leap enabling natural, conversational research at **sub-second latency**.

Tailorbird

India (Remote)

Senior Software Engineer

Sep 2023 - Jul 2025

- Spearheaded the development and maintenance of the **RFP (Request for Proposal) portal**, streamlining the end-to-end bidding process for construction contractors.
- Designed and implemented an AI-powered document parser leveraging **LlamaParse and Retrieval-Augmented Generation (RAG) with OpenAI's GPT models**, extracting critical insights from property assessment reports.
- Integrated an **LLM workflow to extract invoiced items** and its relevant information from contractor invoices and automatically load data into platform projects, eliminating manual process and **reducing processing time by 90%**.
- Developed robust audit logging using database triggers and session metadata, ensuring transparency and accountability across the platform.

Biofourmis

Bangalore

Software Engineer

Mar 2022 - Jul 2023

- Built a serverless architecture for syncing mission-critical medical data using AWS Lambda, API Gateway, and AWS SAM, **enabling seamless data synchronization**.
- Reduced system latency by **25x through Redis-based caching** for frequently accessed data.
- Optimized database design in PostgreSQL **TimescaleDB**, **resulting in 60 to 90 times better query** performance.
- Optimized a microservice by migrating its code base from **Python to Golang**, **resulting in 20 times faster API responses** and better load handling.

Inviz AI

Bangalore

Software Development Engineer

Jul 2020 - Mar 2022

- Implemented and integrated a custom ML model training functionality for Loopr through a robust **MLOps pipeline using Azure ML Studio**, which enabled the platform to streamline the training of labeled data generated on the platform.
- Built data platform and **ETL pipelines for TataCliq**, one of India's leading online marketplace and also engineered datasets to power multiple machine learning models using **AWS Glue**.

PROJECTS

Supaintro (supaintro.com)

2026

- Architected a distributed, **AI-driven motion graphics video production pipeline** that transforms product URLs into branded launch films, orchestrating multimodal **content generation, voice synthesis**, Remotion rendering, and autoscaling AWS Fargate workers through PostgreSQL-backed job queues.

OCDify (ocdify.vyanlabs.in)

2025

- Built a privacy-first AI application leveraging **edge computing** and local LLM inference. Optimized on-device model orchestration, quantized inference, and memory-efficient execution to deliver responsive local-first AI experiences.

TECHNICAL SKILLS

Programming Languages: Python, Golang, SQL/NoSQL | **Frameworks:** FastAPI, Langchain, LangGraph, Flask, Django, PySpark | **Backend Tools:** Socket.IO, Kafka, Airflow, RabbitMQ | **Dev Tools:** Git, Docker | **Databases:** PostgreSQL, MongoDB, DynamoDB, Redshift, MySQL, Redis | **Platforms:** AWS, Azure, GCP
